TFT LCD Operator screen up-grade

Details

Mattson Part number 934-16004-00 is obsolete and can be replaced with JVT-support PN 934-16004-TFT.

This New TFT LCD operator interface up-grade your system to the newest standard. Instead of a CRT display, the new CE standard TFT LCD colour display optimized colours and sharpness.

The brilliant display allows operators to view the display from various angles, improving the monitor viewing scenario.

A powered VGA splitter allows both the Engineering and the Operator displays to be TFT LCD monitors. See Engineering TFT LCD product data sheets.

Fully adjustable and self teaching the display can be adjusted to the users specification.

Easy installation. No drilling, no complicated instructions. A precise install guide is given to allow the swap to take place in less than 30 minutes.

Long life time values of this display allows for continuous operations for many years to come.

Larger screen used to improve readability.

Adjustment buttons easily reachable.

Multiple input modes available, BNC, AV, PC, USB, HDMI and Analog.

A perfect improvement to the Mattson Aspen II Platform.

Benefits
